

# Birdie

DESIGN LUDOVICA+ROBERTO PALOMBA/2012

The Birdie project has expanded and become a complete family of products. The natural evolution of the initial concept, which was successfully introduced in the table and reading versions, Birdie is now available in the ceiling version. A system of ceiling lamps, where a variable number of arms with a white finish, as slender as the branches of a tree, support small white, grey, orange or amaranth diffusers.
